Superwool® Vacuum Formed Products

Datasheet Code 
US: 11-14-115
MSDS Code
US: 354, RP350, RP401
07:2012
Page: 1 of 2

Features

- Rigid, self-supporting fiber insulation
- Available in a variety of sizes and thicknesses
- Based on patented technology
- Reduces thickness of backup insulation up to 50% when replacing insulating firebrick or castables
- Low thermal conductivity and heat storage
- Non-wetting to molten aluminum

Applications

- Molten aluminum contact
- Furnace, kiln, and oven hot face linings
- Flue and chimney linings
- Insulation as backup to:
 - firebrick
 - insulating firebrick
 - refractory castables
 - rammed shapes
- Appliance and heat processing insulation

Product Description

Superwool boards are processed from a slurry consisting of Superwool bulk fiber and organic binders. Each board has cut edges for controlled squareness and trueness. Boards up to 36" wide may be ordered with both surfaces machined smooth to a close thickness tolerance.

Superwool is a low biopersistent fiber, manufactured from pure raw materials and processed to offer excellent performance in high-temperature applications. Superwool offers an alternative to traditional solutions due to its high refractoriness and excellent non-wetting characteristics with molten aluminum.

Superwool provides stability and resistance to chemical attack. Exceptions include hydrofluoric acid, phosphoric acid and strong alkalis (i.e. NaOH, KOH). Superwool is unaffected by incidental spills of oil or water. Thermal and physical properties are restored after drying.

Superwool is ideally suited to individual applications and is available in a wide range of thicknesses and densities. The maximum continuous use temperature depends on the application. Refer to your local Thermal Ceramics representative for advise.

Type

Alkaline Earth Silicate (AES) Wool

CAS number: 329211-92-9
