Superwool® Bulks

Superwool is manufactured from pure raw materials and processed to offer excellent performance in high-temperature applications. Superwool offers an alternative to traditional solutions due to its high refractoriness and excellent non-wetting characteristics with molten aluminum.

Superwool provides stability and resistance to chemical attack. Exceptions include hydrofluoric acid, phosphoric acid and strong alkalies (i.e. NaOH, KOH). Superwool is unaffected by incidental spills of oil or water. Thermal and physical properties are restored after drying.

Superwool is ideally suited to individual applications and is available in a wide range of thicknesses and densities. The maximum continuous use temperature depends on the application. Refer to your local Thermal Ceramics representative for advice.

Type

Alkaline Earth Silicate (AES) Wool CAS number: 329211-92-9

Features

- Low biopersistence
- Thermal stability
- Low heat storage
- Flexible and resilient
- Im mune to thermal shock
- Excellent therm alinsulating perform ance
- Based on patented technology

Applications

- Expansion joints construction
- Base seals
- Low mass kiln car construction
- Tube seal fabrication
- Thermal and a coustical insulation
- As primary raw material for high temperature converted and engineering fibers that are used in:
- Transportation
- Filtration media
- Reinforcement for plastic and resins
- Filler in resins and paints
- Friction material
- Mastic and cement
